

Histology Control Slides

Azer Scientific's histology control slides are suitable for staining protocols which require a control. These Unifrost slides have spaces for both the patient sample and the control material. The two samples can be separated by the red line, which is printed on the reverse side to allow for reagent movement. These slides come positively charged, and with or without clipped corners.

Available for order now:

Histology control slide, clipped corners, 1440/case - **ESCS-100**

Histology control slide, non-clipped corners, 1440/case - **ESCS-101**
